

Admin Mobile App Guide

Run operations from your phone — personnel, shifts, time, and live ops

SecureOps platform guide · generated May 29, 2026

This guide covers the SecureOps app for administrators: monitoring the dashboard, managing personnel and shifts, approving time, running payroll and invoices, handling incidents, and tracking officers live. For deeper back-office work (HR pipeline, bulk imports, exports), use the web Admin Portal — covered in its own guide.

1 Dashboard — your operations hub

1 Read the operational status

The dashboard shows live counts: active shifts, officers clocked in, open incidents, upcoming shifts, total staff, and expiring licenses. Tap any card to jump to that area.

2 Fill open vacancies

A list shows upcoming shifts that still need officers. Tap "Notify" to push a request to every qualified officer, or tap a vacancy to open the shift and assign someone by hand.

3 Scan recent incidents

A feed of the latest incidents is color-coded by severity so critical items stand out. Quick actions link to Clients, Time Approval, Payroll, Invoices, and Licenses.

2 Personnel management

1 Find people

On Personnel, search by name or email and filter by status (All, Active, Inactive, Pending). Badges show who's online now and who's new (joined in the last 7 days).

2 Add an employee

Tap + to open Add Employee. Enter personal details, set the role (Admin or Employee), assign an hourly rate, and list skills.

3 Manage a profile

Open an officer to see contact info, emergency contacts, banking details, and licenses. Tap Edit to update details and pay rate, or use the status toggle to activate/deactivate them.

3 Posting and assigning shifts

1 Browse shifts

On Shifts, filter by Upcoming, Active, Completed, or Cancelled.

2 Post a new shift

Tap + to open Post New Shift. Pick a client and site, set a title, headcount, and required license level (L2, L3, or L4/PPO), enter start/end times, choose whether it repeats, and set the officer pay rate and client bill rate.

3 Assign personnel

Open a shift to see assigned officers. Add qualified officers from the list with +, or remove someone with the X. Posting a shift automatically notifies all qualified officers.

4 Approving time

1 Review entries

On Time Approval, filter by Pending, Approved, or Rejected. Each entry shows logged hours against clock-in/out times for the site and shift.

2 Adjust if needed

In the "Approve hours" field you can override the logged hours — for example, if an officer forgot to clock out.

3 Approve or reject

Tap Approve to finalize the entry or Reject to decline it. Approving feeds both payroll and the client invoice automatically.

5 Payroll and invoices

1 Generate payroll

On Payroll, pick a site and the week-starting date, then tap "Generate from Approved Hours" to calculate gross/net pay for every officer at that site. Toggle individual entries between Pending and Paid.

2 Manage invoices

On Invoices, filter by Draft, Sent, Paid, or Overdue. Pick a site and week and tap "Generate Invoice for Week" to bill the client, then mark drafts Sent and received payments Paid.

TIP

For full payroll execution (ACH/CSV export and bank reconciliation), use the web portal's Pay Run — see the Payroll & Invoicing Process document.

6

Incidents

1 Monitor alerts

On Incidents, filter by Open, Under Review, Resolved, or Closed. Critical incidents carry a red badge.

2 Review the detail

Tap an incident to read the description, the officer's actions taken, and any attached photos. You can jump straight to the reporting officer's profile.

3 Resolve it

Add admin resolution notes and move the status forward (Open !' Under Review !' Resolved).

7

Live map and tracking

1 See who's out there

Live Map shows the location of every officer currently clocked in, refreshing automatically.

2 Check officer status

A list shows each active officer, their shift/site, and when they were last seen. Tap "Maps" to open their coordinates in Google Maps.

8

Clients, sites, and licenses

1 Manage clients and sites

On Clients, add a client with contact info and payment terms (e.g., Net 30). Open a client to manage its sites; tap + to add a physical location with its address and on-site contact.

2 Track licenses

On Licenses, view all officer licenses and filter by Expiring or Expired. Tap + to record a new license with its type, number, level, and expiry date.

9

Communication — Chat and Radio

1 Chat

Create public channels or start a direct message with any employee for real-time coordination.

2 Radio

Pick a channel (Global, Admins, or site-specific) and monitor who's transmitting. Live audio is currently optimized for the web portal; native push-to-talk is planned.
