

Officer Mobile App Guide

Everything you need to work your shifts from your phone

SecureOps platform guide · generated May 29, 2026

This guide walks you through the SecureOps app as an officer: signing in, finding and accepting shifts, clocking in and out, filing reports, using the emergency button, and keeping your profile and pay information up to date. Your app has a bottom tab bar with Home, Shifts, Clock, Incidents, Chat, Profile, and Radio.

1 Getting started

1 Sign in

Open the app and enter your email and the temporary password from your invite email. If two-factor (2FA) is turned on for your account, you'll also enter a 6-digit code from your authenticator app.

2 Set your own password

On your first sign-in you'll be asked to change your temporary password to one only you know. Choose something strong and private.

3 Turn on Face ID / fingerprint (optional)

After your first sign-in you can enable biometric unlock so you don't have to type your password every time.

FORGOT YOUR PASSWORD?

Tap "Forgot password" on the login screen to get a reset link by email. If you don't receive it, contact your administrator.

2 Your Home screen

1 Check your status at a glance

Home shows your week: hours worked, monthly hours, upcoming shifts, and any shifts waiting for you to accept.

2 See if you're on duty

If you're clocked in, a green "ON DUTY" banner appears with a shortcut to the Clock tab. If not, you'll see a Clock In button.

3 Watch for alerts

Red banners warn you about expired or missing licenses and open incidents that need your attention. Quick-action shortcuts let you jump straight to Report Incident, My Shifts, or My Profile.

3 Finding and managing shifts

1 Browse available work

On the Shifts tab, the Available filter shows open slots you qualify for. Tap "Reserve Slot" to book one. The app warns you if the site is more than 50 miles from your home address.

2 Accept or decline assignments

Shifts an admin assigns to you appear as "Pending." Tap Accept to commit, or Decline to release the slot so someone else can take it.

3 Request a swap

For an upcoming shift you can't make, open it and tap "Request Swap." Track incoming and outgoing swap requests on the Swap Requests screen — accept, decline, or cancel as plans change. Swaps still need admin approval.

CLOCK-IN SHORTCUT

A "Clock In Now" button appears on your upcoming/active shift about 1 hour before it starts.

4 Clocking in and out

1 Enable location

Make sure GPS/location is on — the app uses it to confirm you're at the right site.

2 Clock in

On the Clock tab, tap the large green CLOCK IN button. The app finds your site from your GPS location; confirm the prompt. A timer starts and a green "ON DUTY" ring appears.

3 Stay tracked while on duty

While clocked in, the app quietly updates your location about once a minute so dispatch can see you on the live map. If you drift outside the site perimeter, your admins are alerted.

4 Clock out

When your shift ends, tap the red CLOCK OUT button and confirm. Your hours are then sent to an admin for approval.

5 Filing an incident report

1 Open the form

On the Incidents tab, tap the + button.

2 Describe what happened

Enter a title and location, choose a severity (Low, Medium, High, Critical), then write a clear description and the actions you took.

3 Add photos

Capture live photos with "Take Photo" or attach existing ones from your library.

4 Submit and follow up

Tap Submit Report. You can review your past reports and read any resolution notes an admin adds later.

6 Emergency button

1 Press and hold for 3 seconds

On the Home screen, press and hold the red "HOLD 3s FOR EMERGENCY" button. A fill bar shows your progress.

2 Help is alerted instantly

Releasing after 3 seconds silently alerts all admins with your GPS location and raises a critical incident.

3 Call for help

The app then offers a one-tap button to dial 911 (or your company's configured emergency number).

ACCESSIBILITY

With a screen reader active, the emergency control switches to a double-tap action so it's still easy to trigger.

7 Daily reports and patrols

1 Daily Activity Report (DAR)

At the end of a shift, open the DAR screen, fill in your summary, visitor and patrol counts, weather, and any observations, type your name as a signature, then tap Submit report.

2 Patrol checkpoint scans

At a checkpoint, open the Patrol screen, enter the checkpoint code (from the QR/NFC tag), and tap Log scan. The app confirms you're at the correct site and clocked in.

8 Communication — Chat and Radio

1 Chat

The Chat tab lists your channels and direct messages. Tap any room to send and receive messages in real time with your team and admins.

2 Radio (Push-to-Talk)

On the Radio tab, pick a channel (Global, site-specific, etc.) to monitor who's transmitting. On web, hold the microphone button to talk; native push-to-talk audio is coming in a future update.

9 Your profile, pay, and compliance

1 View your profile

The Profile tab shows your pay rate, license level, contact info, banking details, documents, and a "Recent Updates" history of changes HR made.

2 View paystubs

From your profile, open My Paystubs to see year-to-date gross and net, plus each paystub with a breakdown of hours, rate, gross, and tax.

3 Set your availability

On the Availability screen, set your max hours per week and add time windows per day. The app then suggests open shifts that fit your windows.

4 Keep your details current

Use Edit Profile to update phone, address, emergency contacts, and uniform sizes. Sensitive changes (like banking) automatically notify HR.

5 Renew licenses and add training

If a license is expiring, use License Renewal to upload a photo of your new card and its expiry date. Use Training to add new certifications (e.g., CPR, First Aid) for admin verification.
